Statistics; Outline; Statisticians; Glossary; Notation; Journals; Lists of topics; Articles; Portal; Category Fri, 11 Jan 2019 19:51:00 GMT List of statistics articles - Wikipedia - Definition. A non-degenerate distribution is a stable distribution if it satisfies the following property: Let X_1 and X_2 be independent copies of a random variable X . Then X is said to be stable if for any constants $a > 0$ and $b > 0$ the random variable $aX_1 + bX_2$ has the same distribution as $cX + d$ for some constants $c > 0$ and d . The distribution is said to be strictly stable if this holds ... Stable distribution
