By 1000 BC, civilizations used technologies that would eventually form the basis of the various branches of chemistry. Examples include extracting metals from ores, making pottery and glazes, fermenting beer and wine, extracting chemicals from plants for medicine and perfume, rendering fat into soap, making ... Fri, 11 Jan 2019 17:56:00 GMT History of chemistry - Wikipedia - Equilibrium chemistry is concerned with systems in chemical equilibrium. The unifying principle is that the free energy of a system at equilibrium is the minimum possible, so that the slope of the free energy with respect to the reaction coordinate is

zero. This principle, applied to mixtures at equilibrium provides a definition of an equilibrium constant.
