Anomaly detection with Hierarchical Temporal Memory (HTM) is a state-of-the-art, online, unsupervised method. Thu, 10 Jan 2019 01:01:00 GMT Unsupervised real-time anomaly detection for streaming data - Pattern recognition is the automated recognition of patterns and regularities in data. Pattern recognition is closely related to artificial intelligence and machine learning, together with applications such as data mining and knowledge discovery in databases (KDD), and is often used interchangeably with these terms. However, these are distinguished: machine learning is one approach to pattern ...
