

Sat, 12 Jan 2019 13:23:00 GMT fatigue life prediction of solder pdf - Fatigue life. The American Society for Testing and Materials defines fatigue life, N_f , as the number of stress cycles of a specified character that a specimen sustains before failure of a specified nature occurs. For some materials, notably steel and titanium, there is a theoretical value for stress amplitude below which the material will not fail for any number of cycles, called a fatigue ...
