These laws were discovered empirically as far back as 984 AD and have been used in the design of optical components and instruments from then until the present day. Thu, 10 Jan 2019 06:52:00 GMT Optics - Wikipedia - A lens is a transmissive optical device that focuses or disperses a light beam by means of refraction. A simple lens consists of a single piece of transparent material, while a compound lens consists of several simple lenses (elements), usually arranged along a common axis. Lenses are made from materials such as glass or plastic, and are ground and polished or molded to a desired shape.
