Ordinarily the reaction is conducted catalytically and usually the substrates are unsaturated organic compounds . Hydrosilylation - Wikipedia - Asymmetric hydrosilylation has been extended to rhodium-catalyzed intramolecular hydrosilylation and cyclization/ hydrosilylation of 1,6-dienes and -enynes giving a five-membered cyclic silylated product. This chapter is a

comprehensive review on
all of these fruitful
successes reported for the
catalytic asymmetric
hydrosilylation.
